OAUTH APP SETUP GUIDES FOR AGENT BUILDERS

Know the path before you build

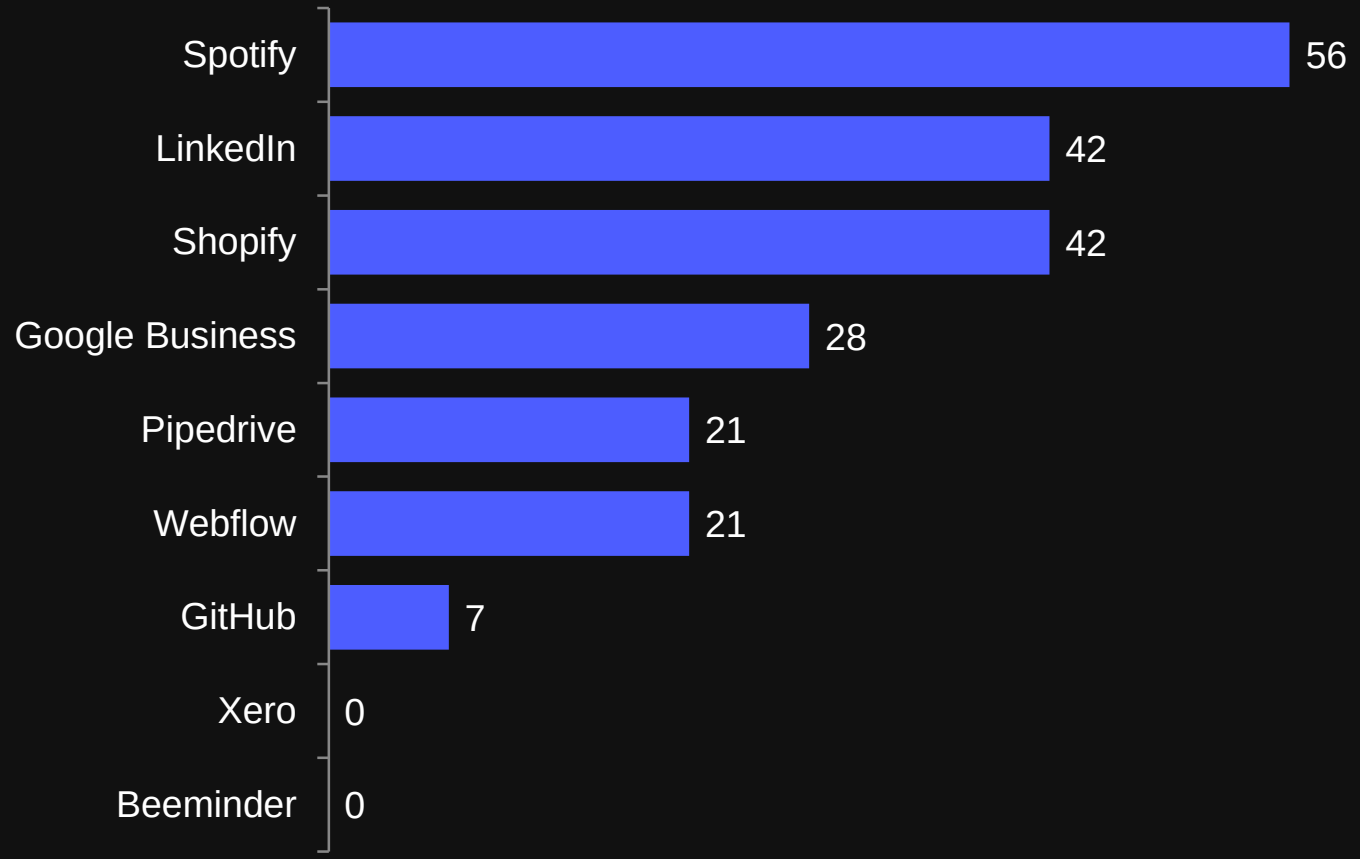

See how hard an OAuth app is, how long it takes, and who does what.

LIVE APP | DEMO VIDEO | SOURCE CODE

An OAuth app takes 30 minutes or 8 weeks. Nobody says which

WAITING ON THE PROVIDER, UPPER ESTIMATE, IN DAYS

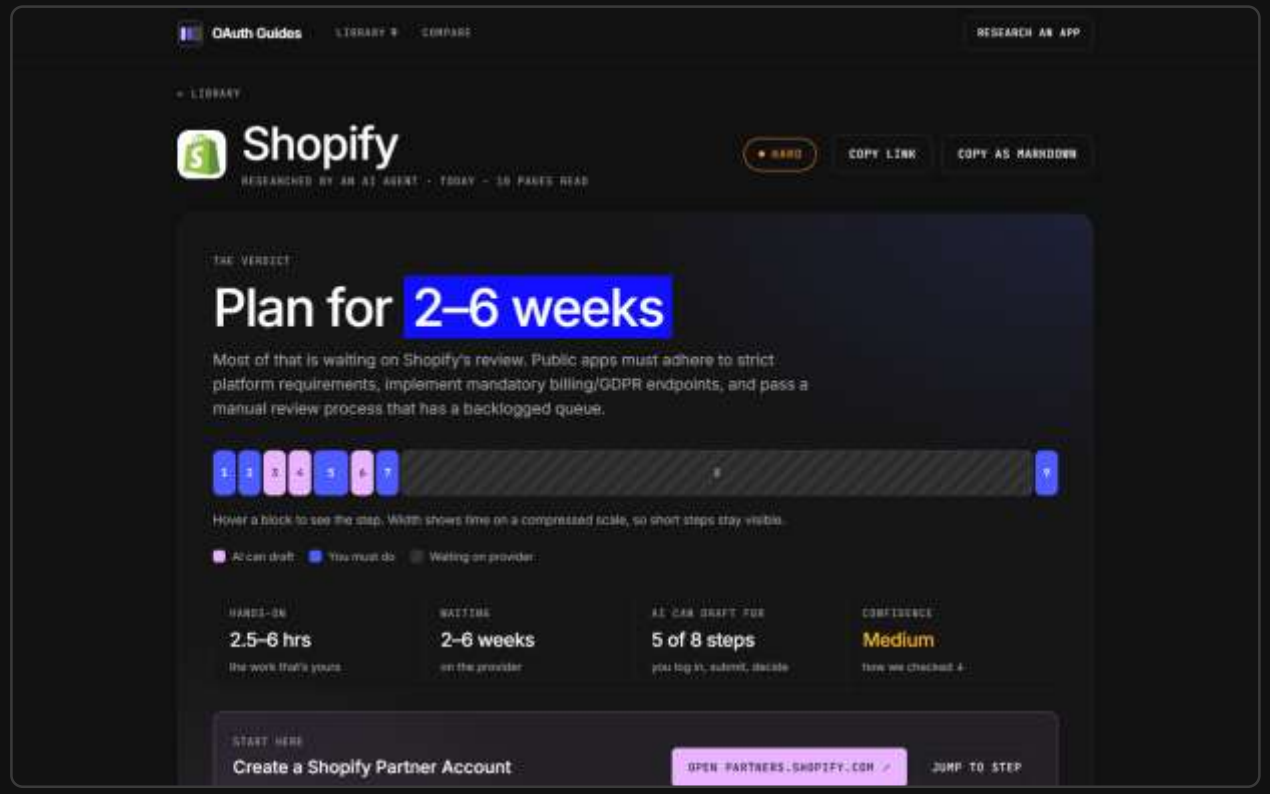

7 hrs

Most hands-on work any app in the library needs

8 weeks

Longest provider review (Spotify). The wait is the problem, not the work

How hard, how long, who does what

A real guide: Shopify

1. **Verdict**
   Difficulty and a plain “plan for 2–6 weeks”
2. **Journey strip**
   Every step as a block. Hands-on work and provider waiting shown apart
3. **Who does what**
   What AI can draft, what only you can do, what waits on the provider
4. **Composio check**
   Is there a managed app, or do you register one
5. **Evidence**
   Every claim links to its source and shows how well it is backed

Any app, researched live in about a minute

01

Search

App name or website

02

Find docs

Official sources first, then a search inside its domain

03

Read

The 10 best pages

04

Write

LLM drafts a structured guide

05

Verify

Code checks every quote against the page

06

Share

Saved and cached, with a link

Already in the library?

Skip steps 2 to 5. The guide opens instantly, and anyone asking for the same new app shares one run.

Key decisions

The model writes. Code verifies

Each claim needs a quote. Code finds it word for word, or the claim is downgraded.

Official sources first

Forums and user-written pages never count as official docs.

Two clocks, not one

Hands-on time and provider waiting are separate. Two hours of work is not two weeks of review.

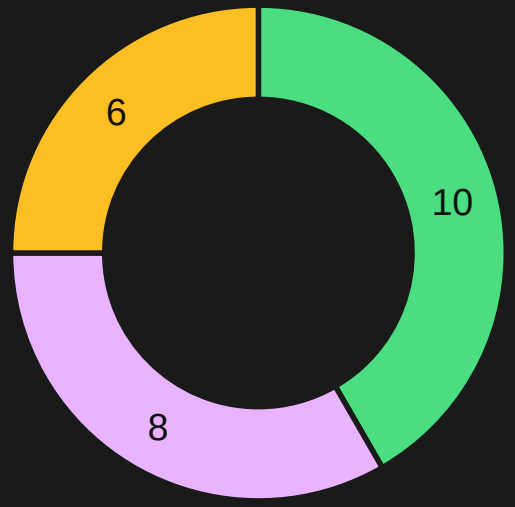

AI drafts, you decide

Logins, payments, legal and identity stay with you. We never ask for credentials.

Runs free, fails soft

Keys rotate, models fall back, and daily limits keep the live flow fair.

EVERY CLAIM HAS A LEVEL

- **Documented** found in official docs
- **Reported** non-official source
- **Inferred** no quote matched

Next: from guidance to doing it for you

01

Draft this for me

Write the app description, scope justification and privacy policy from your use case.

02

Browser agent

Fill in registration forms, then hand over to you at login and payment.

03

Auto re-research

Refresh guides when provider rules change.

TRY IT
